

One system makes a splash

It isn't easy to integrate security and door locks, motorized shades, lighting, a home theater, climate control, and eight zones of music into one system...unless you install a Control4® system. One home automation project by Audio/Video By Design in Suffolk, Virginia, counted on Control4 to make integration and control of a complex system very simple.

Seamless control

Remarkably and despite the setbacks, this project is an excellent example of the seamless, house-wide control for which Control4 is so well known.

A complete 5.1 Digital Surround Sound Theater located outside by the pool; a dining room table, under-lit with specialty lighting; and timed motorized shades are all automated and controlled via the Control4 platform.

Ipad integration

Client Mike Haas reports being delighted with the easy-to-use control that follows him from room

to room. To make things even easier, the entire system can be controlled via Apple iPads which can be carried throughout the house and even brought poolside.

And thanks to Control4 4Sight Internet services, all of these features can also be accessed via the web as well. This means that from any Internet connection, Haas can check his door locks, turn up the thermostat, or activate the lights in any room of the house.

In fact, Haas is so happy with the Audio/Video By Design's final product that he has already ordered additions to his new system.

From any Internet connection, Haas can check his door locks, turn up the thermostat, or activate the lights in any room of the house.
