

## Montage Beverly Hills

Where modern-day indulgence meets sustainability.

Montage Beverly Hills, is a beautiful nine-story hotel in Beverly Hills' legendary Golden Triangle where modern-day indulgence meets sustainability. The hotel, designed in the Spanish Colonial Revival Style, features more than 200 guest rooms, a 5,000-square foot ballroom, a 20,000 square-foot spa, and a 70-person rooftop Conservatory Dining Room.

### The Control4® Solution

From the moment you set foot in the Montage Beverly Hills, you're treated with the utmost in personalized service. And thanks to Control4 Suite Systems, that level of service easily coexists with sustainability. Montage Beverly Hills looked to Control4 to provide an unforgettable, personalized guest experience that complemented their sustainability effort. Being responsible to help improve the environment was important to hotel developers, but nothing could be compromised in the way of comfort, quality or luxury.

### An Individualized Experience for Every Guest

The Montage Beverly Hills worked closely with Control4 to create the ultimate personalized guest service. The hotel often receives special requests from their guests, such as having the temperature set at a certain level or playing specific music when a guest arrives. Control4 Suite Systems allows the hotel to do this for guests, or lets the guests easily set it themselves—without needing any instructions.

### Achieving Sustainability

Montage Beverly Hills is registered with the U.S.G.B.C. for LEED certification. Control4 technology helped them achieve this by providing an automated system for energy modeling load reduction, and by providing a control system for their HVAC and lighting systems. Control4 enables the hotel to put rooms into a "vacant" mode when guests leave, saving both energy and money. It also allows guests to determine how 'green' their stay will be by setting the in-room remote to dim the lights or control the temperature to save energy. The hotel has achieved an overall building efficiency 14% greater than the California Building Code requires.
