

Adding ShairBridge

ShairBridge gives you the ability to stream audio from any AirPlay-capable mobile device or computer to your Control4 system. By adding ShairBridge, you'll create a virtual AirPlay "receiver", which will show up in the list of available AirPlay receivers. Your device must be on the same WiFi network as your Control4 system and have a good network connection to work properly.

You can create a single ShairBridge (AirPlay) receiver that will enable AirPlay streaming in any audio-capable room of the home or multiple ShairBridge receivers (up to twenty), allowing you to send multiple independent AirPlay streams to different speaker locations.

To create a ShairBridge receiver:

1. Select **Add Service**.
2. Select ShairBridge.
3. Give the ShairBridge receiver a name. This will be the name that shows up on the list of AirPlay receivers on your AirPlay-capable device, allowing you to stream to your Control4 system. If you wish to add multiple ShairBridge receivers, give each receiver a unique name such as "Kitchen" or "Kid's Room".
4. Select **OK** to add the device, and then select **OK** to apply changes and reload the Control4 touch screen or Control4 app.

To select the rooms in which a ShairBridge receiver can be selected using a Control4 touch screen or app:

1. Select **Edit Service**.
2. Select the ShairBridge receiver.
3. Select **Show/Hide Service**.
4. Check the box to choose the rooms where you want this ShairBridge receiver to be visible from a Control4 touch screen or app.

If you would like audio to start playing automatically in a room or group of rooms when you send an AirPlay stream to a ShairBridge receiver from your AirPlay-capable device, please contact your dealer who can set this up for you.
