

# T3 In-Wall Touch Screens Upgrade Guide

## Recommended Options for Upgrading from Legacy Touch Screens

Some legacy touch screens have large wall boxes that are difficult to conceal with a T3 touch screen. For best results, we recommend removing the existing wall box and repairing the wall to fit a T3 wall box.

If repairing the wall is not an option, in most cases an adapter kit is available to install the T3 touch screen. The adapter kit will offset the touch screen further from the wall than normal. If you use an adapter kit, we recommend replacing the legacy touch screen with a 10" T3 In-Wall Touch Screen (C4-WALL10).

Use the chart below for the recommended options to upgrade to a T3 touch screen.

If you have this touch screen model...	...these are your upgrade options.
<b>LCD Keypad</b>  Model numbers: KPE-10B1-* KPZ-10B1-* 	1 Remove the existing wall box and repair the wall to fit a T3 wall box.
